Background

Development Studies is a field of knowledge that has evolved through interdisciplinary research on contemporary development issues. As an independent discipline, it is composed of three interrelated core elements: normative (values and ethics), descriptive (theories and concepts), and perspective (strategies and techniques). Substantively, it integrates economic, social, and environmental aspects into a unified framework.

As a doctoral program established in the 2016/2017 academic year—authorized by the Higher Education Decree (SK Dikti) No. 228/KPT/I/2016 dated August 1, 2016—the Doctoral Program in Development Studies (PDSP) aims to produce prominent scholars capable of expressing critical theoretical and practical insights regarding sustainable development, specifically in Indonesia and at the international level.

The changing strategic environment and shifting development paradigms necessitate highly skilled analysts, planners, and policymakers who can drive and create comprehensive development planning policies. The Doctoral Program in Development Studies at the Graduate School of Universitas Andalas is designed to contribute to fulfilling the need for such professional human resources.

Research Priorities

The priority research areas of this study program include:

- Integrated Natural Resource and Environmental Management.
- Infrastructure Development and Regional Planning.
- Social Conflict and Sustainable Development.
- Local Culture and Sustainable Development.
- Sustainable Food and Agricultural Systems Development.
- Public Health and Sustainable Development.
- Extension and Development Communication.
